

## DISASTER QUICK TIPS: BASIC HOME RE-ENTRY

### Safety first

Before entering a building that has been flooded, take care to be safe. Watch for loose plaster, drywall, and ceilings that could fall.

### Wear sturdy shoes

Cut feet are the most common wound after a disaster.

### Use battery-powered lights

Use battery-powered lights or flashlights if you need light for a short time.

### Look for fire hazards

Fire is the most common hazard after floods. Look for:

- Broken or leaking gas lines;
- Flooded electrical wires;
- Furnaces and electrical appliances that are under water;
- Items that can catch fire or explode.

*Note: MDH has detailed fact sheets on these topics. See back page.*

### Check for gas leaks

If you smell gas or hear a blowing or hissing noise:

- Quickly leave the building;
- Turn off the gas at the outside main valve if you can; and
- Call the gas company from a remote location.

If you turn off the gas for any reason, a professional must turn it back on.

### Look for electrical damage

DO NOT step in water:

- If you see sparks, broken or frayed wires;
- Smell burning insulation; or
- To turn off the electricity.

Call an electrician to help.

If you can safely reach the fuse box or circuit breaker, turn off the electricity.

### Pump out basement water slowly

Pump floodwater out of a basement slowly. Pump about one-third of the water each day to avoid damage to basement walls. Pressure from water in the soil outside the walls can break walls if you pump too fast.
